#### **NLP Lab Manual**

#### **Practical No. 1:**

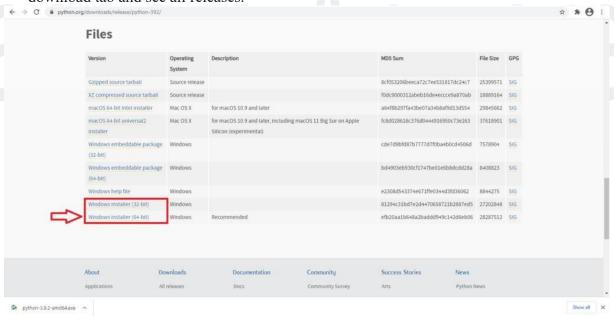

#### a) Install NLTK

#### Python 3.9.2 Installation on Windows

Step 1) Go to link https://www.python.org/downloads/, and select the latest version for windows.

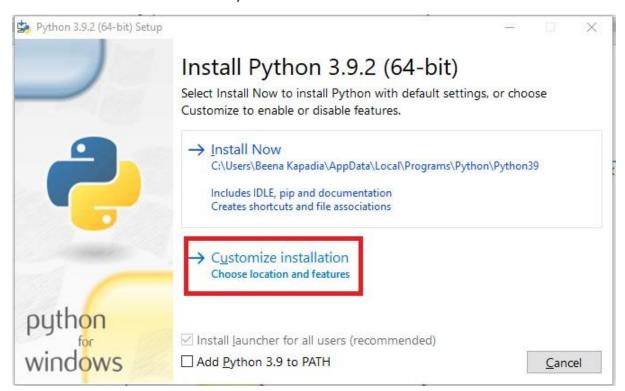

**Note**: If you don't want to download the latest version, you can visit the download tab and see all releases.

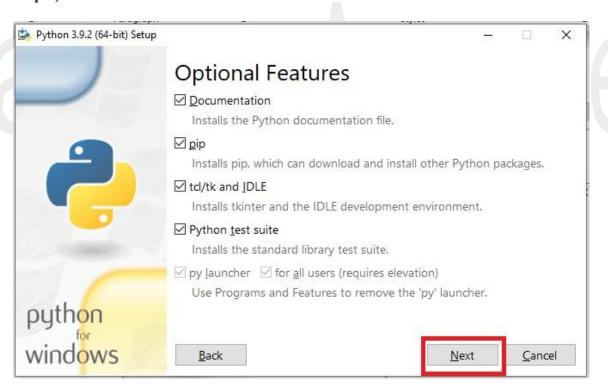

Step 2) Click on the Windows installer (64 bit)

Step 3) Select Customize Installation

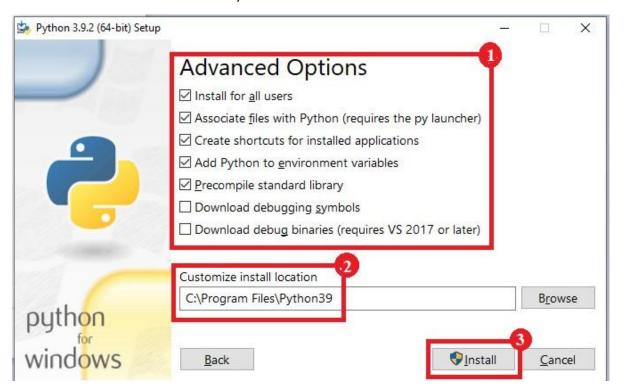

Step 4) Click NEXT

#### Step 5) In next screen

- 1. Select the advanced options
- 2. Give a Custom install location. Keep the default folder as c:\Program files\Python39
- 3. Click Install

**Step 6)** Click Close button once install is done.

**Step 7) open** command prompt window and run the following commands:

C:\Users\Yaseera>pip install --upgrade pip

C:\Users\Yaseera> pip install --user -U nltk

C:\Users\Yaseera>>pip install --user -U numpy

C:\Users\Yaseera>python

>>> import nltk

(Browse https://www.nltk.org/install.html for more details)

## b) Convert the given text to speech. Source code:

```
# text to speech

# pip install gtts

# pip install playsound

from playsound import playsound

# import required for text to speech conversion

from gtts import gTTS

mytext = "Welcome to Natural Language programming"
language = "en"

myobj = gTTS(text=mytext, lang=language, slow=False)

myobj.save("myfile.mp3")

playsound("myfile.mp3")
```

#### **Output**:

welcomeNLP.mp3 audio file is getting created and it plays the file with playsound() method, while running the program.

## c) Convert audio file Speech to Text. Source code:

Note: required to store the input file "male.wav" in the current folder before running the program.

```
#pip3 install SpeechRecognition pydub
```

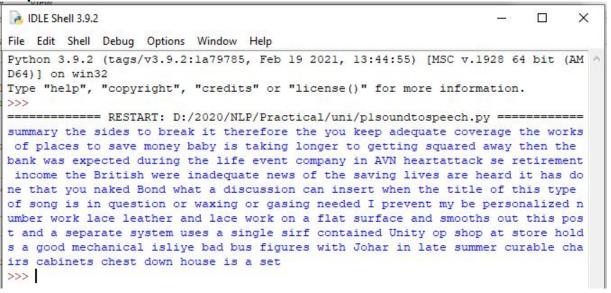

```
import speech_recognition as sr
filename = "male.wav"

# initialize the recognizer
r = sr.Recognizer()

# open the file
with sr.AudioFile(filename) as source:
    # listen for the data (load audio to memory)
    audio_data = r.record(source)
    # recognize (convert from speech to text)
    text = r.recognize_google(audio_data)
    print(text)
```

Input: male.wav (any wav file)

#### **Output:**

# Vaseera Anware

#### **Practical No. 2:**

- a. Study of various Corpus Brown, Inaugural, Reuters, udhr with various methods like filelds, raw, words, sents, categories.
- b. Create and use your own corpora (plaintext, categorical)
- c. Study Conditional frequency distributions
- d. Study of tagged corpora with methods like tagged sents, tagged words.
- e. Write a program to find the most frequent noun tags.
- f. Map Words to Properties Using Python Dictionaries
- g. Study DefaultTagger, Regular expression tagger, UnigramTagger
- h. Find different words from a given plain text without any space by comparing this text with a given corpus of words. Also find the score of words.
- a. Study of various Corpus Brown, Inaugural, Reuters, udhr with various methods like fields, raw, words, sents, categories, source code:

""NLTK includes a small selection of texts from the Project brown electronic text archive, which contains some 25,000 free electronic books, hosted at http://www.brown.org/. We begin by getting the Python interpreter to load the NLTK package, then ask to see nltk.corpus.brown.fileids(), the file identifiers in this corpus:"

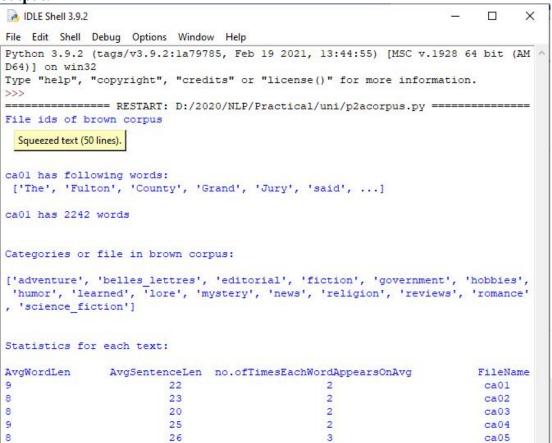

```
import nltk
       from nltk.corpus import brown
       print ('File ids of brown corpus\n',brown.fileids())
       "Let's pick out the first of these texts — Emma by Jane Austen — and give it a short
       name, emma, then find out how many words it contains:"
       ca01 = brown.words('ca01')
       # display first few words
       print('\nca01 has following words:\n',ca01)
       # total number of words in ca01
       print('\nca01 has',len(ca01),'words')
       #categories or files
       print ('\n\nCategories or file in brown corpus:\n')
       print (brown.categories())
       "display other information about each text, by looping over all the values of fileid
        corresponding to the brown file identifiers listed earlier and then computing statistics
        for each text."
       print ('\n\nStatistics for each text:\n')
       print
('AvgWordLen\tAvgSentenceLen\tno.ofTimesEachWordAppearsOnAvg\t\tFileName')
       for fileid in brown.fileids():
          num chars = len(brown.raw(fileid))
          num words = len(brown.words(fileid))
```

num sents = len(brown.sents(fileid))

num vocab = len(set([w.lower() for w in brown.words(fileid)]))

print (int(num\_chars/num\_words),'\t\t\t', int(num\_words/num\_sents),'\t\t\t',
int(num\_words/num\_vocab),'\t\t\t', fileid)

#### output:

## b. Create and use your own corpora (plaintext, categorical) source code:

"NLTK includes a small selection of texts from the Project filelist electronic text archive, which contains some 25,000 free electronic books, hosted at http://www.filelist.org/. We begin by getting the Python interpreter to load the NLTK package, then ask to see nltk.corpus.filelist.fileids(), the file identifiers in this corpus:"

#### import nltk

from nltk.corpus import PlaintextCorpusReader

```
corpus_root = 'D:/2020/NLP/Practical/uni'
filelist = PlaintextCorpusReader(corpus_root, '.*')
print ('\n File list: \n')
print (filelist.fileids())
```

"display other information about each text, by looping over all the values of fileid corresponding to the filelist file identifiers listed earlier and then computing statistics for each text."

print (filelist.root)

```
print ('\n\nStatistics for each text:\n')
    print
('AvgWordLen\tAvgSentenceLen\tno.ofTimesEachWordAppearsOnAvg\tFileName')
    for fileid in filelist.fileids():
        num_chars = len(filelist.raw(fileid))
        num_words = len(filelist.words(fileid))
        num_sents = len(filelist.sents(fileid))
        num_vocab = len(set([w.lower() for w in filelist.words(fileid)]))
        print (int(num_chars/num_words),'\t\t\t', int(num_words/num_sents),'\t\t\t',
int(num_words/num_vocab),'\t\t', fileid)
```

```

## h. Find different words from a given plain text without any space by comparing this text with a given corpus of words. Also find the score of words.

NN'), ('Nov.', 'NNP'), ('29', 'CD'), ('.', '.')]

ne), ('Nov.', None), ('29', None), ('.', None)]

board', 'NN'), ('as', 'IN'), ('a', 'DT'), ('nonexecutive', 'JJ'), ('director',

[('Pierre', 'NN'), ('Vinken', None), (',', None), ('61', None), ('years', None), ('old', None), (',', None), ('will', None), ('join', None), ('the', None), ('board', None), ('as', None), ('a', None), ('nonexecutive', None), ('director', None)

Initialize the hash tag test data or URL test data and convert to plain text without any space.. Read a text file of different words and compare the plain text data with the words exist in that text file and find out different words available in that plain text. Also find out how many words could be found. (for example, text = "#whatismyname" or text = www.whatismyname.com. Convert that to plain text without space as: whatismyname and read text file as words.txt. Now compare plain text with words given in a file and find the words form the plain text and the count of words which could be found)

#### 5. Import NLP Libraries for Indian Languages and perform:

Note: Execute this practical in https://colab.research.google.com/

#### a) word tokenization in Hindi

**Source code:** 

!pip install torch==1.3.1+cpu -f https://download.pytorch.org/whl/torch\_stable.html

!pip install inltk

!pip install tornado==4.5.3

from inltk.inltk import setup setup('hi')

from inltk.inltk import tokenize

hindi\_text = """प्राकृ तिक भाषा सीखना बहुि तिलचस्प है।"""

# tokenize(input text, language code)
tokenize(hindi\_text, "hi")

#### output

['\_प्रांकः तिक', '\_भाषा', '\_सीखना', '\_बह**्रि**ः', '\_तिलचस्प', '\_हैः, '।']

## b) Generate similar sentences from a given Hindi text input Source code:

!pip install torch==1.3.1+cpu -f https://download.pytorch.org/whl/torch\_stable.html

!pip install inltk

!pip install tornado==4.5.3

from inltk.inltk import setup setup('hi')

from inltk.inltk import get similar sentences

# get similar sentences to the one given in hindi output = get\_similar\_sentences('मैं आज बहुि खुश हूं', 5, 'hi')

print(output)

#### **Output:**

['मैं आजकल बहुि खुश हूं', 'मैं आज अत्यतिक खुश हूं', 'मैं अभी बहुि खुश हूं', 'मैं विमान बहुि खुश हूं', 'मैं विमान बहुि खुश हूं']

#### c) Identify the Indian language of a text

**Source code:** 

!pip install torch==1.3.1+cpu -f https://download.pytorch.org/whl/torch\_stable.html

!pip install inltk

!pip install tornado==4.5.3

from inltk.inltk import setup setup('gu')

from inltk.inltk import identify\_language #Identify the Lnaguage of given text identify\_language('બીના કાપડિયા')

Output: gujarati

# Vaseera Anware
